Cal OES COASTAL REGION

- Nothing significant to report.

Cal OES INLAND REGION

- Nothing significant to report.

Cal OES SOUTHERN REGION

Virulent Newcastle Disease (VND) in Chickens, Los Angeles and San Bernardino Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle disease (VND) in chickens in Los Angeles and San Bernardino Counties.

- CDFA is scaling up their response to this incident as more cases have been detected.
- The current Incident Command Post (ICP) is too small for the current 50 responders and supplies so CDFA has requested assistance in searching for a larger location with adequate storage.
- [CDFA has confirmed that there are no commercial premises currently involved.](#)
- [Cal OES Southern Region will have staff embedded with the CDFA Team on 05/25/18.](#)
- [Cal OES Southern Region is assisting CDFA in identifying a facility to expand operations.](#)

FIRE ACTIVITY

WEATHER SYNOPSIS BY REGION

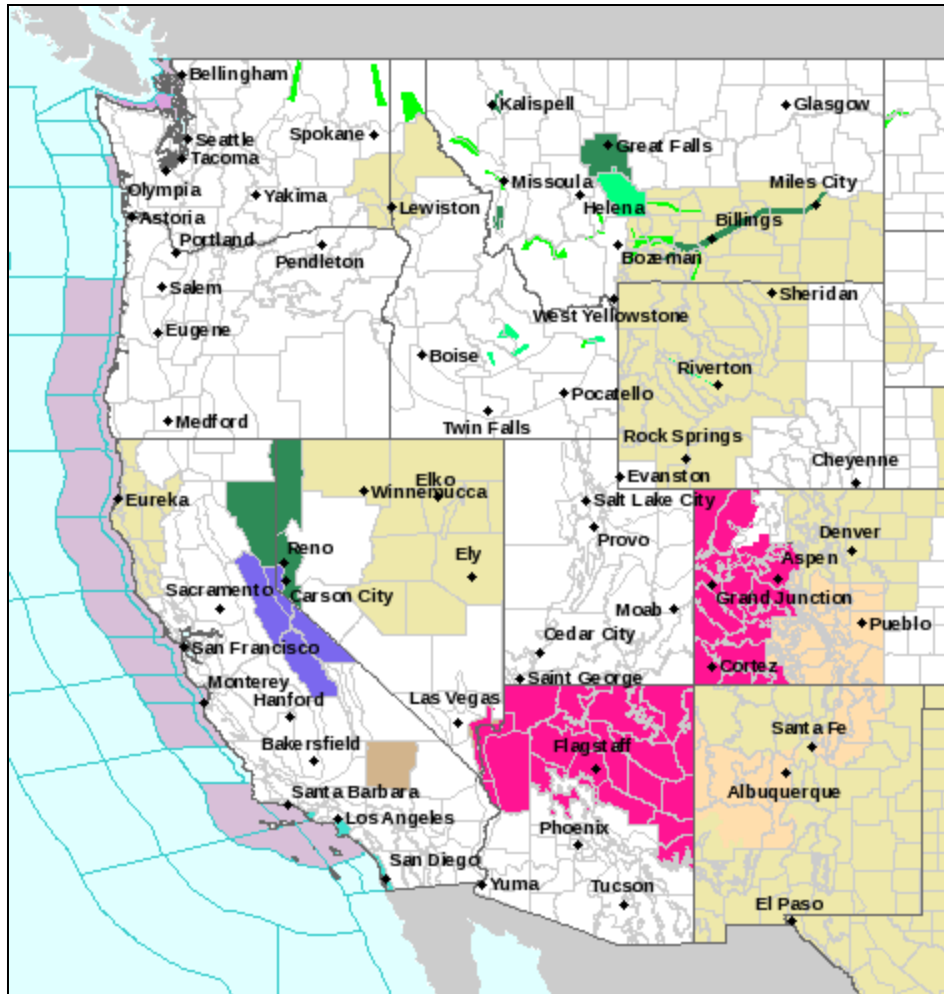

NORTHERN CALIFORNIA

Another Pacific low pressure system approaching the coast will allow the wet unsettled weather pattern to continue in the region. The low will pass over the southern end of the region Friday. Widespread showers and thunderstorms are expected in the mountains, with scattered activity in valleys. Temperatures will be 10-15 degrees below normal Friday. S-W winds will gust to 20-30 mph Friday, and outflow gusts from thunderstorms could reach 35 mph. The system will exit to the east early Saturday, with showers and a few thunderstorms lingering in eastern areas. A NW-NE flow pattern will set up over the area Saturday as high pressure builds in from the west. Although isolated daily afternoon showers or thunderstorms are possible over the Sierra crest Saturday through Monday, the majority of the region will be dry with minimum afternoon relative humidity in the teens. Afternoon temperatures will increase to 10-15 degrees above normal by Sunday or Memorial Day. Peak northerly downslope winds will be 20-25 mph in wind-prone spots from the western Cascade-Sierra slopes to the coastal range. By Tuesday a weak trough will approach the region and cause an increase in shower and thunderstorm activity.

SOUTHERN CALIFORNIA

Isolated showers will continue to occur near the Sierra Crest. An approaching low pressure area will cause southerly winds of 20-30 mph to develop toward evening in the Owens Valley and Inyo National Forest. This low will slowly pass through the central part of the state Friday, leading to scattered showers over the northern half of the state. Wetting rains will be possible north of Fresno County with amounts approaching a half inch from Yosemite N.P. northward. Light rain and drizzle will be possible near the higher terrain across the rest of the area Friday morning. Cool, cloudy weather will continue into Saturday morning, but some clearing is expected by Saturday afternoon as the low moves east of the area. Gusty north winds of 15-25 mph will be possible in the I-5 Corridor Saturday night. A weak ridge will bring warming to the area early next week, and by Monday and Tuesday, expect high temperatures to reach near normal readings. Another weak low may bring cooler, onshore flow back into the weather picture next Wednesday.
